

Pediatric

P-07 Allergic Reaction / Anaphylaxis

Priorities

Airway – stabilize using the appropriate adjuncts
Be prepared for advanced airway interventions
Remove antigen source if possible
Identify level of severity of the reaction
Early transport

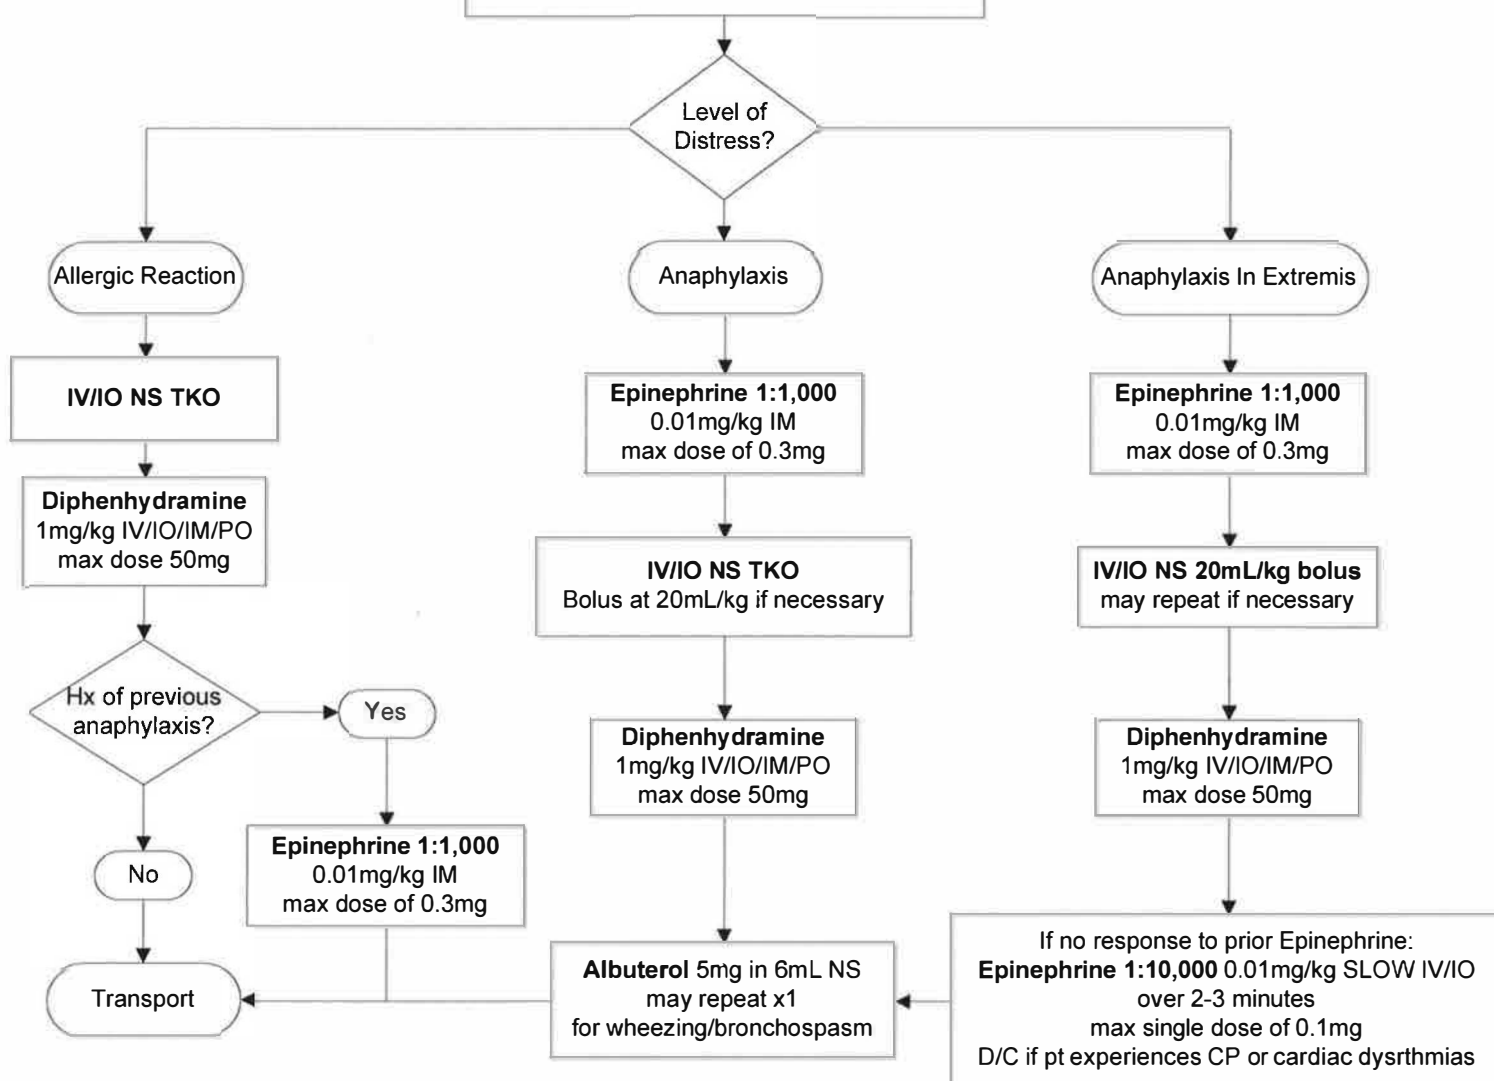

Levels of severity

Allergic Reaction: Acute onset cutaneous reactions, e.g. hives, pruritus, flushing, rash, or angioedema NOT involving the airway

Anaphylaxis: One or more of the following symptoms: stridor, wheezing, hoarseness, edema involving the airway, hypotension, tachycardia

Anaphylaxis In Extremis: age appropriate hypotension (reference Pediatric Basic Principles Attachment A), airway compromise, ALOC (agitation, restlessness, somnolence), severe respiratory distress

Oxygen – Titrate to SpO₂ >97%
Cardiac Monitor
Advanced Airway Interventions if necessary

DISRUPTED COMMUNICATIONS

In the event of a "disrupted communications" situation, Solano County Paramedics may utilize all portions of this treatment protocol without Base Hospital Contact as needed to stabilize an immediate patient.
